

The Revolutionary, Patented Board Retainer

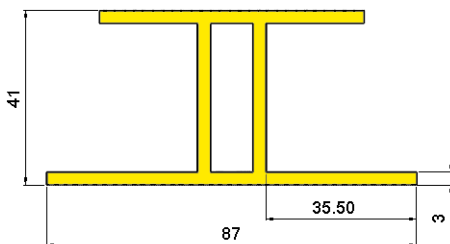

safelinx
SIMPLE, QUICK AND SAFE - ACROSS THE BOARD

About

The revolutionary patented Safelinx board retainer has been designed to be the fastest, most cost effective method of board retention that is available to date.

Key Features

The Safelinx board retainers are available in both 5 board (1125mm) and 4 Board (915mm) and are suitable for both wood and plastic 38mm scaffolding boards.

Benefits

The Safelinx board retainer brings many benefits to the scaffolding industry. Designed to keep your workforce safer by reducing tripping hazards, it is lighter and faster to work with than any previously approved retaining system.

Its patented design increases the working life of scaffolding boards reducing warping and twisting, and like many traditional options, it will not dig into or damage the boards.

Safelinx has been used on many industrial sites and has proven a popular and safe addition to the scaffolder's inventory.

*Included in the NASC TG12-16 Guidance as
an appropriate method of tying down
scaffolding boards*
